***CLARIN Bazaar***

***CLARIN Annual Conference 2022***

Tuesday 11<sup>th</sup> October 2022

Draft versions of the forthcoming CLARIN Resource Families 'Online Tools for Corpus Analysis' and 'Desktop Tools for Corpus Analysis' are available via the link below (in two separate sheets in a single file). Please add your comments, suggestions, corrections etc to the draft guide. Request edit access if you want to add more information.

<https://bit.ly/CLARINCorpusTools>

Remarks on the scope of these Resource Families:

- applications don't need to be already CLARIN-related in any way;
- a corpus analysis tool is defined as something that will at least allow the basic operations of corpus linguistics: search and display of concordance lines;
- with online corpora, we decided to make an entry for each deployment, rather than each different application, so for something widely used like CQPweb, NoSketchEngine, Korp there is an entry for each deployment online at a different centre, since this is likely to be most useful for users looking for access to corpora;
- NOT in scope are other corpus tools such as those ONLY for building corpora, for annotation, and for more complex forms of analysis and visualization; some of the tools included in the spreadsheet can do these things, but they need first to pass the basic threshold of having the basic functions of corpus analysis.

Many thanks for any input!
